

THAT WHICH IS CLAIMED:

1. A package, particularly for packing industrial products, comprising a product-holding body provided with a through-bore, a grip region associated to the body and a flow controlling and interrupting valve associated to the through-bore, the package being characterized in that the valve comprises an elongate and <sup>?</sup>through-bored of flexible material, the body being fixed by means of at least one first end portion thereof to the through-bore, <sup>1, a.</sup>the second end portion of the body, opposed to the first portion, extending outwardly of the through-bore and being foldable over the elongate body into the bore, so as to enable one to close the valve.

2. A package according to claim 1, characterized in that the flexible body has a substantially tubular shape.

3. A package according to claim 1 or 2, characterized in that the body is fixed to <sup>n.d.</sup>the internal portion of the bore by means of first and second opposed fixation regions, the second region being substantially larger than the first region.

4. A package according to claim 3, characterized in that the fixation between the body and <sup>n.d.</sup>the internal portion of the bore in the second region is effected substantially over the whole region of contact between them both.

5. A package according to claim 4, characterized in that the second end portion of the body is selectively foldable in the direction of the first region inside the cavity.
